Re: Forest Lakes Homeowners Association
Forest Lakes Circle - West Palm Beach, Florida
Mansard Roofs' Inspection

Inspection Date: April 14, 2022 to May 5, 2022

Roof Mansard Types: Shakertown Cedar Panels and Stone Coated Metal Shake Panels

Pursuant to your request I conducted a Non-Destructive Visual Inspection of the Fifty-Eight (58) Buildings' Mansard Roofs on the overall condition of each Unit, (232). These buildings have for the most part Shakertown Cedar Panels, (see attached), that are constructed by the Manufacturer on a plywood base with #1 Perfection Type Cedar Shingle adhered or glued to the plywood base panel and are affixed/fastened with 7d box galvanized nails to either space sheathing or solid plywood decking with a Life Expectancy of approximately Fifteen to Eighteen Years when new.

Some units have been repaired with a combination of #1 Perfection Cedar Shingles and others were repaired using shims, which are not a roofing product and do not have a Product Approval from the State of Florida or Miami-Dade Notice of Acceptance, (NOA). The Units with the shim repairs were most likely not performed with a Permit and are not a substitute for use in the repair of the Shakertown Panels, only #1 Perfection Cedar Shingles are acceptable.

There are some individual Units that have had their mansards replaced using a Stone Coated Steel Shake Panel, (see attached), that is a good alternative to the Shakertown Panels with a Life Expectancy of approximately Forty, (40), to Forty-Five, (45), Years. The following are my findings, comments and recommendations;

1) **Building #1520:**

- A. Fair Condition; most panels are face screwed. (Photographs #1 & #2)
- B. Poor Condition; missing shingles and curled. (Photographs #3 & #4)

- C. Poor Condition; missing shingles and curled. (Photographs #5 & #6)
- D. Fair Condition; missing shingle and some curling shingles. (Photographs #7 & #8)

2) **Building #1524:**

- A. Fair Condition, (Photograph #9)
- B. Fair Condition; some curling shingles. (Photographs #10 & #11)
- C. Fair Condition; there are missing and curling shingles. (Photographs #12 & #13)
- D. Fair Condition; there are some missing and curling shingles. (Photographs #14 & #15)

3) **Building #1530:**

- A. Fair Condition; some missing, curled and face nailed shingles. (Photographs #16 & #17)
- B. Fair Condition; some missing, curled and face nailed shingles. (Photograph #18)
- C. Fair Condition; some missing and curled shingles. (Photographs #19 & #20)
- D. Good/Fair Condition; some face nailed shingles. (Photographs #21 & #22)

4) **Building #1534:**

- A. Poor Condition; some missing, curling and improper shim repairs. (Photographs #23 & #24)
- B. Fair Condition; some curling shingles and improper shim repairs. (Photographs #25 & #26)
- C. Fair Condition, (Photographs #27 & #28)
- D. Poor Condition; some missing, curled and improper shim repaired shingles. (Photographs #29 & #30)

5) **Building #1540:**

Conclusion:

Most of the individual units are in "Fair" to "Poor" Condition and are nearing the end of their life expectancy, but can be properly repaired using Florida Building Code Approved Cedar Products as explained in the front of this Report. Building #1729 - Unit "A" needs to be replaced due to the condition of the panels and one side was replaced with shims in a hap hazard way. Unit "C" appears to have been recently re-roofed with shims and stained or painted brown. In between the gaps of the shims you can see tin-tags and 30# felt, this is a Code Violation, and I doubt a permit was pulled for this work. I would recommend, if the mansard roofs are replaced, using the Stone Coated Metal Shake Panel that has a Life Expectancy of approximately Forty (40) to Forty-Five (45) Years and the only maintenance for these panels is to pressure clean them and cut back any vegetation or trees that may damage the panels. This Inspection is for informational purposes only and does not constitute a Warranty or Guarantee of any kind. This concludes my Report, should you have any additional questions please contact me. I reserve the right to supplement or amend this Report if additional information is made available.

- ▶ *Over insulative board*
- ▶ *Over spaced sheathing*
- ▶ *Mansard applications (at least 20/12 pitch)*

Curve Application.
Shakertown's Craftsman shingle panels may be applied to slight curves over solid nailable sheathing provided that each shingle on the panel is nailed with two fasteners $\frac{3}{4}$ " from each edge, 1" from the top.

Mansard Application.
The Craftsman panels may be applied on mansards of at least 20/12 pitch (60°) over ASTM Type 30 building paper, where codes permit.

Fasteners.
Shakertown recommends using a corrosion resistant (hot dipped galvanized or stainless steel) 7d box nail. Nails should always be of sufficient length to penetrate the studs a minimum $\frac{3}{4}$ ". Special applications or high wind loads may require optional fasteners. Power nailing is permitted, but care should be taken to set the head flush with the panel. Sinking the heads into the siding panels can affect the long-term performance.

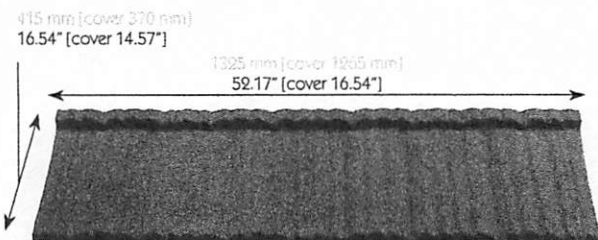

General sidewall panel installation

Varitile Shake

Formed from the highest quality steel and protective coatings, the panel is incredibly strong, lightweight and weather resistant.

INSTALLATION

Shake panels are overlapped left to right with a stagger of 12" or 300 mm.

Panels are placed onto battens spaced 368 mm or 14.5".

A downturned front edge (nose) and upturned rear edge (shelf) on each tile creates a strong, weatherproof, overlapping and interlocking assembly. Each tile is secured with four nails in the panel nose, away from water channels.
