NOTE	E: Any documentation used in	validating the compliance	oo or ovistonee of each	onstruction or mitigatic	an attributa must			
accom	pany this form. At least one phone in The insurer may ask additional actions and the control of	ohotograph must accomp	any this form to valid	ate each attribute marke	d in questions 3			
	<b>Building Code</b> : Was the structure built in compliance with the Florida Building Code (FBC 2001 or later) OR for homes located in the HVHZ (Miami-Dade or Broward counties), South Florida Building Code (SFBC-94)?							
	A. Built in compliance with the a date after 3/1/2002: Building	Permit Application Date (	MM/DD/YYYY)//					
	B. For the HVHZ Only: Built in compliance with the SFBC-94: Year Built For homes built in 1994, 1995, and 1996 provide a permit application with a date after 9/1/1994: Building Permit Application Date (MM/DD/YYYY)//							
	C. Unknown or does not meet	the requirements of Answer	er "A" or "B"					
OF	of Covering: Select all roof covering: Select all roof covering of Original Installation/Revering identified.							
	2.1 Roof Covering Type:	Permit Application Date	FBC or MDC Product Approval #	Year of Original Installation or Replacement	No Information Provided for Compliance			
	☐ 1. Asphalt/Fiberglass Shingle							
	2. Concrete/Clay Tile	07 / 12 / 2006	Prmt#: B06037524					
	3. Metal							
	4. Built Up							
	5. Membrane							
	6. Other							
	<del></del>							
	<ul> <li>A. All roof coverings listed above meet the FBC with a FBC or Miami-Dade Product Approval listing current at time of installation OR have a roofing permit application date on or after 3/1/02 OR the roof is original and built in 2004 or later.</li> <li>B. All roof coverings have a Miami-Dade Product Approval listing current at time of installation OR (for the HVHZ only) a</li> </ul>							
	roofing permit application after 9/1/1994 and before 3/1/2002 OR the roof is original and built in 1997 or later.							
	C. One or more roof coverings	•		"B",				
	D. No roof coverings meet the requirements of Answer "A" or "B".							
3. <b>Ro</b>	of Deck Attachment: What is t	<u></u>						
	A. Plywood/Oriented strand board (OSB) roof sheathing attached to the roof truss/rafter (spaced a maximum of 24" inches o.c.) by staples or 6d nails spaced at 6" along the edge and 12" in the fieldOR- Batten decking supporting wood shakes or wood shinglesOR- Any system of screws, nails, adhesives, other deck fastening system or truss/rafter spacing that has an equivalent mean uplift less than that required for Options B or C below.							
	B. Plywood/OSB roof sheathing with a minimum thickness of 7/16"inch attached to the roof truss/rafter (spaced a maximum of 24"inches o.c.) by 8d common nails spaced a maximum of 12" inches in the fieldOR- Any system of screws, nails, adhesives, other deck fastening system or truss/rafter spacing that is shown to have an equivalent or greater resistance than 8d nails spaced a maximum of 12 inches in the field or has a mean uplift resistance of at least 103 psf.							
	C. Plywood/OSB roof sheathing with a minimum thickness of 7/16" inch attached to the roof truss/rafter (spaced a maximum of 24" inches o.c.) by 8d common nails spaced a maximum of 6" inches in the fieldOR- Dimensional lumber/Tongue & Groove decking with a minimum of 2 nails per board (or 1 nail per board if each board is equal to or less than 6 inches in width)OR-

		or greater resistance than 8d common nails spaced a maximum of 6 inches in the field or has a mean uplift resistance of at least 182 psf.	ast
		D. Reinforced Concrete Roof Deck.	
		E. Other:	
		F. Unknown or unidentified.	
		G. No attic access.	
4.		To Wall Attachment: What is the <u>WEAKEST</u> roof to wall connection? (Do not include attachment of hip/valley jacks with tof the inside or outside corner of the roof in determination of WEAKEST type)	nin
		A. Toe Nails	
		☐ Truss/rafter anchored to top plate of wall using nails driven at an angle through the truss/rafter and attached the top plate of the wall, or	l to
		☐ Metal connectors that do not meet the minimal conditions or requirements of B, C, or D	
	Mi	mal conditions to qualify for categories B, C, or D. All visible metal connectors are:	
		Secured to truss/rafter with a minimum of three (3) nails, and	
		Attached to the wall top plate of the wall framing, or embedded in the bond beam, with less than a ½" gap from the blocking or truss/rafter <b>and</b> blocked no more than 1.5" of the truss/rafter, <b>and</b> free of visible severe corrosion.	n
		3. Clips	
		☐ Metal connectors that do not wrap over the top of the truss/rafter, <b>or</b>	
		☐ Metal connectors with a minimum of 1 strap that wraps over the top of the truss/rafter and does not meet the position requirements of C or D, but is secured with a minimum of 3 nails.	ıail
		C. Single Wraps	
		Metal connectors consisting of a single strap that wraps over the top of the truss/rafter and is secured wit minimum of 2 nails on the front side and a minimum of 1 nail on the opposing side.	h a
	Ш	D. Double Wraps	
		Metal Connectors consisting of 2 separate straps that are attached to the wall frame, or embedded in the bond beam, on either side of the truss/rafter where each strap wraps over the top of the truss/rafter and is secured wi a minimum of 2 nails on the front side, and a minimum of 1 nail on the opposing side, <b>or</b>	th
		☐ Metal connectors consisting of a single strap that wraps over the top of the truss/rafter, is secured to the wall o both sides, and is secured to the top plate with a minimum of three nails on each side.	n
		E. Structural Anchor bolts structurally connected or reinforced concrete roof.	
		F. Other:	
		G. Unknown or unidentified	
		H. No attic access	
5. <b>Roof Geometry:</b> What is the roof shape? (Do not consider roofs of porches or carports that are attached only to the fascia of the host structure over unenclosed space in the determination of roof perimeter or roof area for roof geometry classification.			1
		A. Hip Roof Hip roof with no other roof shapes greater than 10% of the total roof system perimeter.	
		Total length of non-hip features: feet; Total roof system perimeter: feet  Roof on a building with 5 or more units where at least 90% of the main roof area has a roof slope of	
		less than 2:12. Roof area with slope less than 2:12 sq ft; Total roof area sq ft  C. Other Roof Any roof that does not qualify as either (A) or (B) above.	
6.	Sec	ndary Water Resistance (SWR): (standard underlayments or hot-mopped felts do not qualify as an SWR)	
		A. SWR (also called Sealed Roof Deck) Self-adhering polymer modified-bitumen roofing underlayment applied directly to a sheathing or foam adhesive SWR barrier (not foamed-on insulation) applied as a supplemental means to protect the dwelling from water intrusion in the event of roof covering loss.	he
		B. No SWR. C. Unknown or undetermined.	
		C. Chanowh of undetermined.

Any system of screws, nails, adhesives, other deck fastening system or truss/rafter spacing that is shown to have an equivalent

\*This verification form is valid for up to five (5) years provided no material changes have been made to the structure or inaccuracies found on the form.

DIVI Quality Control Approved V13/2021 7. **Opening Protection:** What is the **weakest** form of wind borne debris protection installed on the structure? **First**, use the table to determine the weakest form of protection for each category of opening. Second, (a) check one answer below (A, B, C, N, or X) based upon the lowest protection level for ALL Glazed openings and (b) check the protection level for all Non-Glazed openings (.1, .2, or .3) as applicable.

Opening Protection Level Chart		Glazed Openings			Non-Glazed Openings		
Place an "X" in each row to identify all forms of protection in use for each opening type. Check only one answer below (A thru X), based on the weakest form of protection (lowest row) for any of the Glazed openings and indicate the weakest form of protection (lowest row) for Non-Glazed openings.		Windows or Entry Doors	Garage Doors	Skylights	Glass Block	Entry Doors	Garage Doors
N/A	Not Applicable- there are no openings of this type on the structure		Х	Х	N/A		
Α	Verified cyclic pressure & large missile (9-lb for windows doors/4.5 lb for skylights)						
В	Verified cyclic pressure & large missile (4-8 lb for windows doors/2 lb for skylights)						
С	Verified plywood/OSB meeting Table 1609.1.2 of the FBC 2007						
D	Verified Non-Glazed Entry or Garage doors indicating compliance with ASTM E 330, ANSI/DASMA 108, or PA/TAS 202 for wind pressure resistance						
N	Opening Protection products that appear to be A or B but are not verified	X					
IN	Other protective coverings that cannot be identified as A, B, or C						
Х	No Windborne Debris Protection	Х				Х	Х

- A. Exterior Openings Cyclic Pressure and 9-lb Large Missile (4.5 lb for skylights only) All Glazed openings are protected at a minimum, with impact resistant coverings or products listed as wind borne debris protection devices in the product approval system of the State of Florida or Miami-Dade County and meet the requirements of one of the following for "Cyclic Pressure and Large Missile Impact" (Level A in the table above).
  - Miami-Dade County PA 201, 202, and 203
  - Florida Building Code Testing Application Standard (TAS) 201, 202, and 203
  - American Society for Testing and Materials (ASTM) E 1886 and ASTM E 1996
  - Southern Standards Technical Document (SSTD) 12
  - For Skylights Only: ASTM E 1886 and ASTM E 1996
  - For Garage Doors Only: ANSI/DASMA 115

☐ A.1 All Non-Glazed openings classified as A in the table above, or no Non-Glazed openings exist
$\square$ A.2 One or More Non-Glazed openings classified as Level D in the table above, and no Non-Glazed openings classified as Level B, C, N, or
X in the table above
☐ A.3 One or More Non-Glazed Openings is classified as Level B, C, N, or X in the table above

- B. Exterior Opening Protection- Cyclic Pressure and 4 to 8-lb Large Missile (2-4.5 lb for skylights only) All Glazed openings are protected, at a minimum, with impact resistant coverings or products listed as windborne debris protection devices in the product approval system of the State of Florida or Miami-Dade County and meet the requirements of one of the following for "Cyclic Pressure and Large Missile Impact" (Level B in the table above):
  - ASTM E 1886 and ASTM E 1996 (Large Missile 4.5 lb.)
  - SSTD 12 (Large Missile 4 lb. to 8 lb.)
  - For Skylights Only: ASTM E 1886 and ASTM E 1996 (Large Missile 2 to 4.5 lb.)
  - ☐ B.1 All Non-Glazed openings classified as A or B in the table above, or no Non-Glazed openings exist
  - ☐ B.2 One or More Non-Glazed openings classified as Level D in the table above, and no Non-Glazed openings classified as Level C, N, or X in the table above
  - ☐ B.3 One or More Non-Glazed openings is classified as Level C, N, or X in the table above
- □ C. Exterior Opening Protection- Wood Structural Panels meeting FBC 2007 All Glazed openings are covered with plywood/OSB meeting the requirements of Table 1609.1.2 of the FBC 2007 (Level C in the table above).
  - C.1 All Non-Glazed openings classified as A, B, or C in the table above, or no Non-Glazed openings exist
  - C.2 One or More Non-Glazed openings classified as Level D in the table above, and no Non-Glazed openings classified as Level N or X in the table above
  - ☐ C.3 One or More Non-Glazed openings is classified as Level N or X in the table above

#### **Roof Mitigation Upgrade Report**

The roof covering (i.e. shingles, tiles or metal panels) and the sheathing beneath it form one of your home's critical shields of protection from high winds and rain. When parts of the roof covering and sheathing below it blow away, the inside of your home becomes completely exposed to the elements. This significantly increases the risk to both life and property.

One of the purposes of this inspection is to document the presence or absence of certain attic and roof features that have proven to be valuable in high-wind conditions. While the age and condition of your current roof was *not* part of a windstorm mitigation inspection, certain items have been identified that in the future could increase your level of protection, as well as a potentially decrease your premium.

When it becomes necessary to replace your existing roof, an investment in the specific features outlined below should be discussed with a licensed professional. Your insurance agent can provide you with details of potential policy credits that may assist you in making your decision.

**Secondary Water Resistant ("SWR") Barrier.** Our report indicates that your roof does not currently have 1) strips or sheets of a self-adhering modified bitumen barrier attached directly to the top of the roof deck sheathing, or 2) a high-strength, closed-cell foam adhesive barrier on all the seams throughout your attic. The presence of either of these types of valid SWR barriers provides increased protection against water intrusion. Before having your roof replaced, be sure to inquire of your roofing professional regarding the cost of these options.

Please contact DMI with questions about this report, or to schedule a re-inspection following the installation of one or more of these specific features. You should contact DMI at (800) 469-0434, and Press Option 1 to schedule a re-inspection. For customer service, you can:

- · Dial (800) 469-0434 and press Option 6,
- · Open a Live Chat with us at www.windstorminspections.com, or
- · Email us at research@dmifla.com

DMI thanks you for the opportunity to evaluate your home and present the ways in which you can help mitigate the unique risks associated with windstorms. It has been our pleasure to serve you.

#### **Wall Construction Estimate**

#### 10220 Andover Coach Circle

Please note that at as a courtesy to your insurance agent or carrier, we have included below our estimate of the Wall Construction percentages of your home, classified between wood frame, masonry/concrete, or other wall construction types.

Wood Frame:	<u>15</u> %
Masonry/Concrete:	_85_%
Other	%

- DMI assumes no liability whatsoever for the accuracy of this wall construction estimate.
- These percentages are provided as a courtesy and on a best-efforts basis, based on a cursory survey of the property
  while separately performing a windstorm mitigation inspection. This estimated data was previously provided on the
  windstorm mitigation inspection itself, and as many industry participants would still like to see it along with the mitigation
  inspection, DMI has elected to voluntarily provide it.
- Note that per the guidelines provided by certain insurance carriers, 1) gable end walls are included in the above wall construction percentages, and 2) the openings associated with doors and windows are not taken into account when calculation the estimated percentages.
